The portfolio's inception date for performance calculation purposes is 20 Nov 2019.

Your closing balance (ending market value) is the amount you would have received if you closed your account at 31 Mar 2022 (before any outstanding fees were deducted). The current value may have changed because of the movement in value of the underlying investments in your portfolio and any fees since 31 Mar 2022.

Portfolio total dollar and percentage returns are inclusive of franking credits. Percentage returns have been calculated using the Time Weighted Return (TWR) method.

Past performance is not an indication of future performance.

#### Gain/loss

The gain/loss is the net of the realised and unrealised gain/loss for the performance period. The gain/loss for short options will include a realised gain from the option premium received within the period.

The performance gain/loss is different from the gain/loss shown in valuation or taxation reports, which is calculated using the original cost base at a tax lot level.

Please note, accurate gain/loss reporting is dependent on the provision of complete and accurate cost information across the portfolio.

## Investment movements

01 Jan 2022 to 31 Mar 2022

### Total return amount for investments

This is the total dollar return based on the realised and unrealised Gain/loss for the period before expenses, plus income and franking credits accrued. Investment movement amounts are included on an accrual basis, net of transaction costs such as brokerage.

### Percentage investment returns

The percentage return for each investment is before expenses and has been calculated using the approximate return method. This method calculates the percentage total return by dividing the total return amount by the starting market value plus net investment movements within the performance period. If the ending value is zero, the total return amount including franking credits is just divided by starting value.

The percentage return attributable to income is the sum of total income and franking credits divided by the starting value plus the net of investment movements, expressed as a percentage.

The percentage capital return, which is the percentage return attributable to the investment's realised and unrealised Gain/loss, is the total percentage return minus the percentage income return.

Past performance is not an indication of future performance.
